Notes	 All parameters NOT specially mentioned are measured at 230VAC input, rated load and 25°C of ambient temperature. Tolerance: Includes set up tolerance, line regulation and load regulation. The LED driver is considered as a component that is operated in conjunction with final equipment. EMC performance could be affected by the complete installation. Original equipment manufacturers may need to conduct additional EMC testing and certification on the final equipment. Loading range from 10% to 100%. Dimming Operation

- Dimming is with installing a leading edge, or trailing edge TRIAC (AC phase cut) dimmer across the AC input.
- Compatible with most leading edge and trailing edge TRIAC (AC phase cut) dimmers. Australian compatibility table available on request.
- It is recommended that a dimmer, with a power rating three times higher than that of the rated output of the LED driver is used.

Connection Diagram

- 1) This LED driver should be installed by a qualified electrician.
- 2) Please make sure the LED driver is installed with adequate ventilation around it to allow for heat dissipation.
- 3) Ensure that all wiring is correct before testing in order to avoid damage to the LED driver, or the LEDs.
