## Dimming Operation

- Dimming is with installing a leading edge, or trailing edge TRIAC (AC phase cut) dimmer across the AC input.
- Compatible with most leading edge and trailing edge TRIAC (AC phase cut) dimmers. Australian compatibility table available on request.
- It is recommended that a dimmer, with a power rating three times higher than that of the rated output of the LED driver is used.

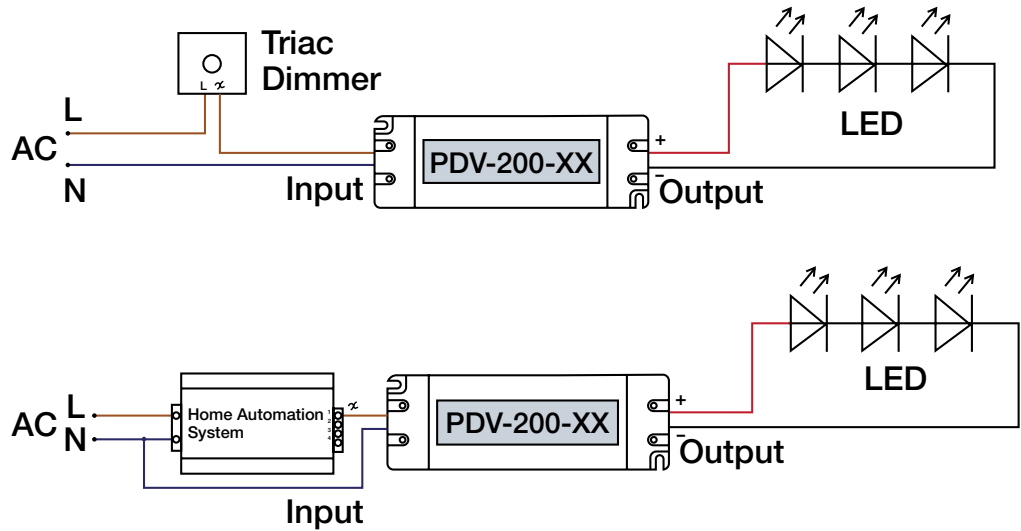

## Mechanical Specification

- Output cable type: Rubber H05RN-F 2\*1.5mm<sup>2</sup>
- Connect LED to LED driver via the output cable: Red output(V+) Positive, Black output (V-) negative.
- Incorrect wiring could result in damage to the LED driver, which is not covered by the warranty.
- Contact your supplier with specific input, or output configuration requests.

## De-rating Curve

• If being used in higher ambient temperatures, ensure the load on the LED driver is de-rated in accordance with this chart. Failure to do so could lead to a premature failure, which is not covered by the warranty.

## Important

- 1) This LED driver should be installed by a qualified electrician.
- 2) Please make sure the LED driver is installed with adequate ventilation around it to allow for heat dissipation.
- 3) Ensure that all wiring is correct before testing in order to avoid damage to the LED driver, or the LEDs.
